

Malware Analysis Report:

- Basic Details:

Malware Name: n.IGENERIC

SHA-256:

2807336626d442de78d5a78d4e7a04b79540007ffac57b6d20292ef416c69105

Classification: Generic Trojan / Potential Backdoor / Loader

Packer Used: ASPack

File Type: Windows PE (Portable Executable)

Malware Family: Unknown (n.IGENERIC often refers to generic detections for obfuscated loaders or droppers)

- **Step-by-Step Analysis Based on Checklist:**

#	Step	Tools Used	Findings
1	Incident Response Questions	Manual Interview	No clear infection vector. Could be email-based or drive-by-download
2	Log Analysis	Sysmon, Event Viewer	Logs show unknown EXE launched from %TEMP%. No digital signature
3	Areas to Look For	Manual, Autoruns	Created persistence via HKCU\Software\Microsoft\Windows\CurrentVersion\Run\nagent
4	Traffic Inspection (Wireshark)	Wireshark	Beacons over port 443 to suspicious domain update-patch[.]xyz
5	Prefetch Inspection	Manual	NIGENERIC.EXE-<HASH>.pf found – confirms execution.

#	Step	Tools Used	Findings
6	Passkey / Credential Theft Check	attrib, PowerShell	Uses token impersonation but no direct LSASS dump
7	Registry Entry (Run Key)	regedit	HKCU\Software\Microsoft\Windows\CurrentVersion\Run\nagent (malicious persistence)
8	Memory Fingerprint	Volatility, WinHex	Injects shellcode into svchost.exe, allocates RWX memory
9	DNS Query Logs	Wireshark	DNS requests to update-patch[.]xyz, not from user browser
10	nslookup of Ips	CMD	update-patch[.]xyz resolves to 192.99.244.45 (OVH France)
11	TCP 3-Way Handshake	Wireshark	SYN → SYN-ACK → ACK established with remote server
12	Firmware Reversing	Binwalk	Not applicable – not firmware
13	MD5 Signature Check	md5sum	f187c6c7d8a2d8b7c7a390ea9a909e9f – flagged on VirusTotal
14	Hex Editor Neo	Hex Editor Neo	Found: POST /api, cmd=, update-patch, nagent.db
15	Snort Signature	Snort	Snort alert triggered on custom rule for /api/task URI
16	Packer/Compiler Detection	PEiD	ASPack detected, MSVC compiler
17	HTTP/HTTPS Inspection	Wireshark	Unencrypted HTTP headers over HTTPS tunnel, repetitive /api/ping
18	VirusTotal Scan	VirusTotal	45+ detections; flagged as Trojan.Generic, Agent, Loader

#	Step	Tools Used	Findings
19	User Profile Data Check	Manual	nagent.db file found in %APPDATA%\Logs – SQLite file with task logs

• Key Behaviors & Capabilities:

<u>Feature</u>	<u>Behavior</u>
<u>Persistence</u>	<u>Registry-based autorun (HKCU)</u>
<u>C2 Communication</u>	<u>Periodic beaconing to C2 (update-patch[.]xyz) over HTTPS</u>
<u>Process Injection</u>	<u>Injects code into svchost.exe</u>
<u>Dropper Behavior</u>	<u>Capable of downloading additional payloads</u>
<u>Info Stealing</u>	<u>Sends hostname, OS, public IP, and session info to C2</u>
<u>Anti-analysis</u>	<u>ASPack obfuscation, dynamic API resolution</u>

• Indicators of Compromise (IOCs):

<u>Indicator Type</u>	<u>Value</u>
<u>SHA-256</u>	<u>2807336626d442de78d5a78d4e7a04b79540007ffac57b6d20292ef416c69105</u>
<u>MD5</u>	<u>f187c6c7d8a2d8b7c7a390ea9a909e9f</u>
<u>Dropped File</u>	<u>%APPDATA%\nagent.exe, %APPDATA%\Logs\nagent.db</u>
<u>Registry Key</u>	<u>HKCU\Software\Microsoft\Windows\CurrentVersion\Run\nagent</u>

<u>Indicator Type</u>	<u>Value</u>
<u>Domain</u>	<u>update-patch[.]xyz</u>
<u>IP Address</u>	<u>192.99.244.45</u>
<u>HTTP URIs</u>	<u>/api/ping, /api/task, /api/report</u>
<u>YARA Strings</u>	<u>cmd=, socket, api, ping interval</u>

- **POC Report Summary:**

[PoC - n.IGENERIC Malware Analysis]

SHA-256:

2807336626d442de78d5a78d4e7a04b79540007ffac57b6d20292ef416c69105

MD5: f187c6c7d8a2d8b7c7a390ea9a909e9f

Type: Generic Trojan (likely Loader)

Persistence: HKCU\...\Run\nagent

C2: update-patch[.]xyz (IP: 192.99.244.45)

Packer: ASPack

Injected Process: svchost.exe

Behavior:

- Connects to /api/ping and /api/task
- Drops nagent.db (SQLite) with stolen info

- Avoids detection using packer and encryption

Tools Used: PEiD, Wireshark, Volatility, Hex Editor Neo, VirusTotal
